

Wall Niches

Chemcrest's decorative wall niches have been carefully designed to fit any wall in a new home or a renovation. All four of our designs may be easily installed into a 2 x 4 or 2 x 6 wall - our smaller niches fit between 16" on center studs. Installation instructions are provided with each niche to ensure a beautiful fit and finish whether installed by a professional carpenter or by a Do It Yourselfer.

Choose from Chemcrest's smaller options - the small niche with decorative shell pattern or the more modern smooth niche. Or choose a larger niche with or without additional casing options. An interesting option to consider is a backlit niche where part of the niche sill is removed and replaced with white translucent lexan. You or your customer installs their own low voltage light fixture inside the wall behind the niche to illuminate the whole cove.

Used in a foyer or a stair well or as a crowning touch in any room, a Chemcrest wall niche is a beautiful and economical addition.

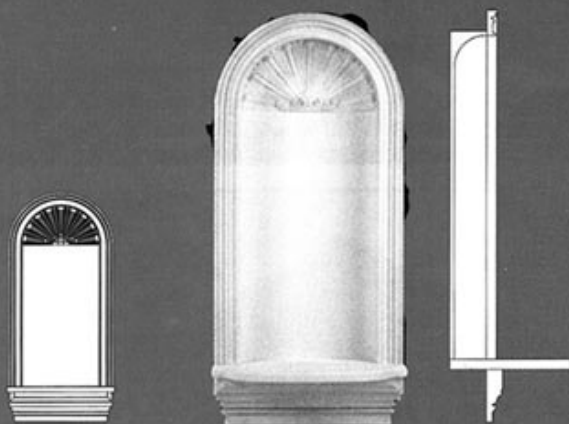

Small Niche with Shell Pattern

N12040-C1 Small Niche with Shell Pattern.

N12040-C1-BL Small Niche with Shell Pattern -
Outfitted for Backlighting.

Wall Niche Installation Instructions (For N12040-C1 and N12040-C2)

Step 1:

Position cardboard template (provided with your wall niche) on wall, in desired position.

Note: Ensure the template is centered between wall studs

Tip: Use a "stud-finder" to locate studs to prevent incorrect positioning of template.

Step 2:

Trace around template with a pencil onto drywall or wall paneling.

Step 3:

Use a drywall knife or saw to cut through the drywall or paneling.

Note: It is not very important that the cut be very neat as the niche "casing" will hide all cut lines

Step 4:

Remove the drywall /paneling portion that has been cut and position niche inside opening.

Tip: Use a level on the "sill" of the niche to ensure that it is sitting level; If not, use the drywall knife to level the bottom of the opening.

Step 5:

Remove the niche and lay a bead of adhesive down the center of the backside of the "casing".

Step 6:

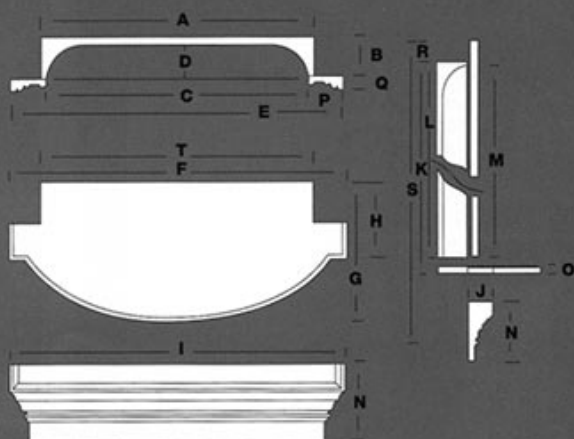

Reposition niche into opening – ensuring niche is sitting level – and push casing against drywall to ensure adhesive touches the wall.

Step 7:

Nail through "casing" into the stud to fix niche into place while adhesive cures. Fill nail holes with wood putty or hole filler.

Step 8:

Paint- or faux finish – your newly installed niche to match your home décor- or if you prefer, leave it as is !!

WALL NICHE SIZING CHART

Item	Description	Dimensions in Inches			
		N12040-C1-Shell N12040-C2-Smooth	N13065-C	N13065-C0	N12244-C-BL
